

ABSTRACT OF THE DISCLOSURE

A structure of a press-contacting holding part is not complicated so that press-contacting operation of press-contacting an electric wire to the press-contacting terminal is easily and precisely performed. According to the invention, an apparatus of press-contacting of electric wire includes a case holding part for holding case provided with a press-contacting terminal, an electric wire holding part for holding the electric wire positioned by the positioning part, a press-contacting driving mechanism for driving the electric wire held by the electric wire holding part so that the electric wire is pushed into a slot part of the press-contacting terminal to provide pressure contact therebetween.
